SAP MM S/4HANA 2023

Dead Stock Analysis Report

Portfolio Project – Training System
System: SAP S/4HANA 2023
Training System Module: SAP MM / Inventory Management
Note: This is developed in the SAP Training system for demo purposes

Designed and implemented a custom SAP MM inventory analytics report to identify dead stock and slow-moving materials.

The solution was built using SQVI by integrating stock, master data, and material movement history, then deployed via custom transaction code ZDEADSTK using SE93.

Business Requirement

Warehouse and procurement teams lacked a single report to monitor materials with stock on hand but low or no movement. Standard reports required multiple transactions and manual consolidation.

Objectives

- Identify materials with current stock and old movement dates
- Detect slow-moving / dead stock inventory
- Improve working capital utilization
- Support disposal, transfer, or procurement reduction decisions
- Provide easy end-user execution through custom T-code.

Scope

In Scope: Plant-level inventory visibility, storage location stock, material descriptions, movement dates/types, user execution via T-code.

Out of Scope: Automatic disposal postings, forecasting, Fiori app development.

Solution Overview

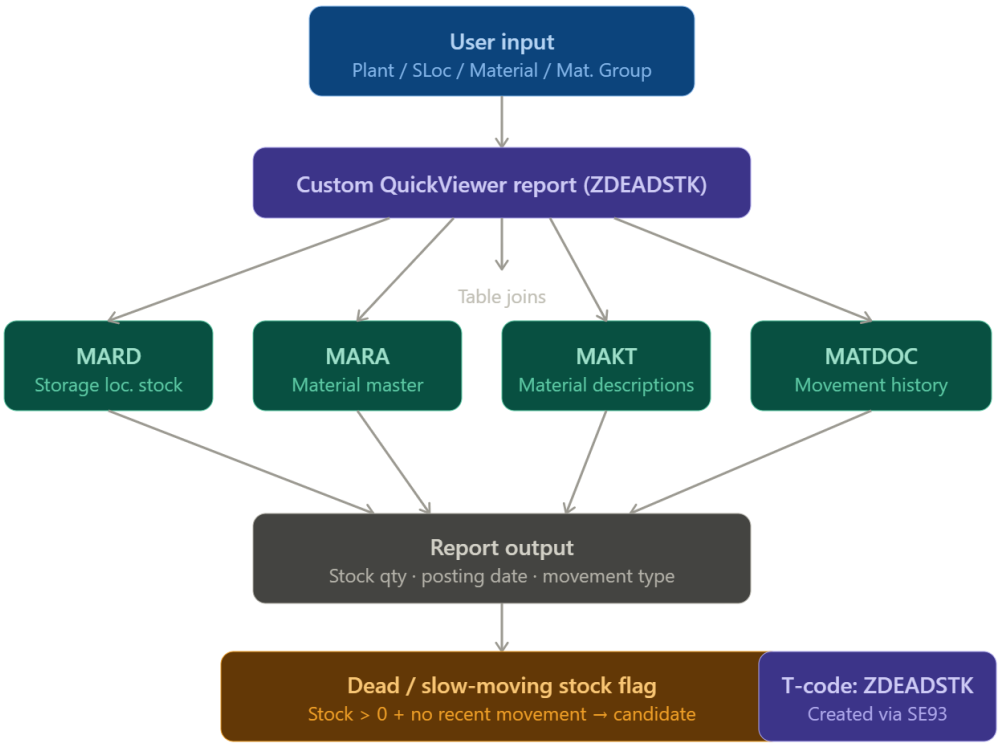
Custom QuickViewer report (SQVI) created by joining:

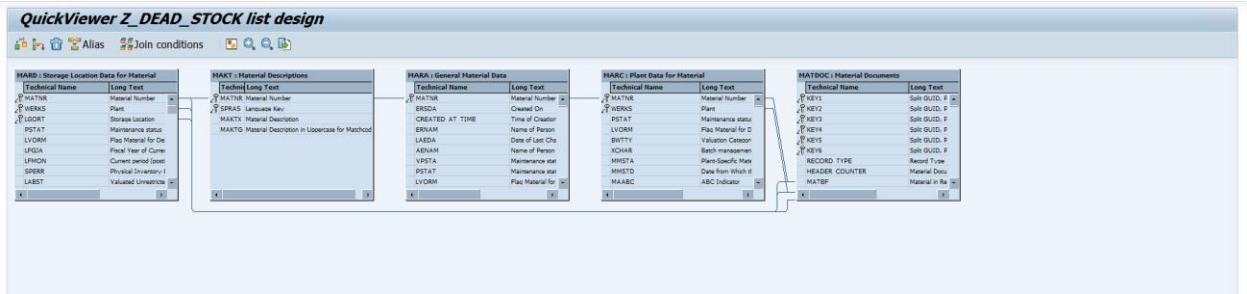
- MARD – Storage location stock
- MARA – Material master
- MAKT – Material descriptions
- MATDOC – Material movement history

Custom transaction **ZDEADSTK** created in **SE93** for direct execution, eliminating the need for users to navigate SQVI directly.

Functional Logic

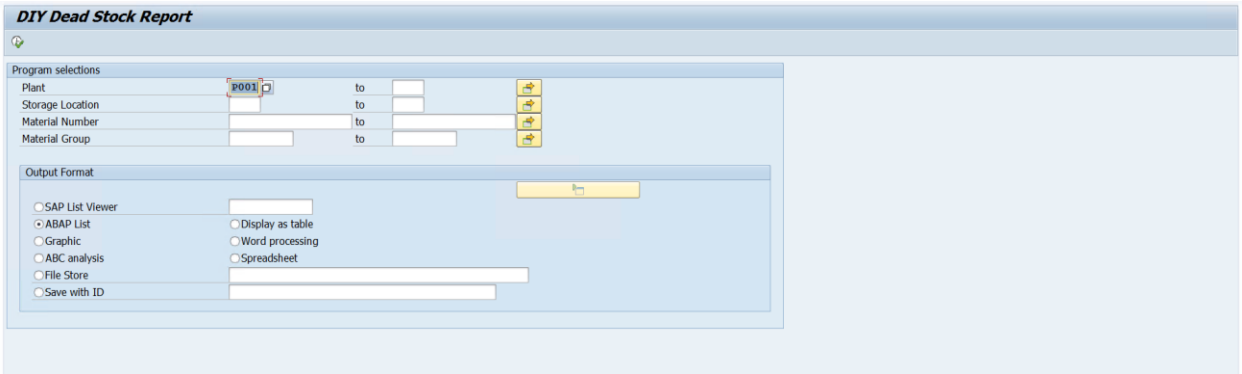
- User enters Plant / SLoc / Material / Material Group on the selection screen
- Report fetches unrestricted stock quantity from MARD
- Movement history displayed with posting date and movement type from MATDOC
- Materials with stock > 0 and no recent movement are classified as candidates for slow-moving/dead stock review





Selection Screen Fields

Plant, Storage Location, Material Number, Material Group, Output Format



Output Fields

Material Number, Plant, Storage Location, Unrestricted Stock, Base UOM, Material Description, Material Group, Material Type, Movement Quantity, Posting Date, Movement Type

Business Benefit

- Consolidates data from MB52, MB51, and MM60 into a single executable report — reducing manual effort and transaction switching
- Reduces risk of excess stock going undetected, supporting better working capital management
- Enables warehouse and procurement teams to act faster on disposal, transfer, or reorder decisions
- Demonstrates practical SAP enhancement capability using standard tools (SQVI + SE93) — no development team required
- Built in under 2 hours; reusable across plants with minimal configuration change

Technical Artifacts

- **SQVI Query Name:** Z_DEAD_STOCK
- **Transaction Code:** ZDEADSTK
- **Created via:** SQVI + SE93
- **Authorization:** Standard user access in training system

Test Scenarios

- Execute report for Plant P001
- Filter by stock > 0
- Sort by oldest posting date to surface longest-idle materials
- Validate materials with no recent movement are flagged as candidates
- Verify transaction ZDEADSTK launches report directly without SQVI navigation
